Hello

My name is Harsh Shandilya

msfjarvis@gmail.com   +918447660591   msfjarvis.website   Ghaziabad, India

Profile

I am a young and driven Android developer with DevOps and system administration experience alongside. I have successfully deployed and maintained multiple apps with large userbases (exceeding 300,000 daily active users) as well as contributed to a large number of open source projects and continue to do so.

Skills

Java	Kotlin	Bash scripting	Python

Rust

Projects

Viscerion   Side project
August 2018 - current
Unofficial Android client for the WireGuard VPN protocol, rewritten entirely in Kotlin, redesigned and fleshed out with extra features not available on the official app. Over a thousand downloads on the Play Store with an average rating of 4.6

https://github.com/msfjarvis/viscerion

Android Password Store   Side project
October 2018 - current
Android application compatible with ZX2C4's pass command line application. Since I joined as a co-maintainer, I've significantly improved both UI and UX of the application as well as rewritten significant parts into Kotlin.

https://github.com/android-password-store/Android-Password-Store

floating-action-button   Side project
May 2018 - current
Specialized Android library for Material Design promoted actions around the floating action button specifications

https://github.com/msfjarvis/floating-action-button

Languages

English   Full working proficiency

Hindi   Native

Experience

Senior Android engineer   Projekt Development LLC
July 2017 - July 2019   Remote work, headquartered in Philadelphia
At Projekt I worked in tandem with other maintainers on substratum, coordinating the open source repository and releases for the duration of my employment. I also worked on Hyperion launcher from it's inception up until my resignation. I have also served the DevOps needs of the organisation as and when required.
